

Cleaner/Cheaper/Made in the USA!

High Pressure Cylinder Tanks

Thank you for this opportunity to serve you with your compressed natural gas needs. We share in your enthusiasm & commitment to go cleaner and greener. CNG United has traveled the world in search of the finest CNG products available. Our CNG systems are second to none and our high pressure cylinders are as beautiful as they are functional. The development of these tanks pioneered composite fuel tanks for natural gas. In the 70's these quality tanks helped the United States Dept of Transportation to develop the first safety standards for composite tanks and manufactured the first DOT approved composite fuel tank.

Our cylinders exceed the national safety standards. They are durable Carbon Fiber wrapped, light weight, type (III) composite tanks. 3600 psi "DOT" approved. *They are state-of-the-art, with proven performance.* CNG United high pressure cylinders are built to surpass most any standard. In fact our cylinders can be certified to any safety standard in the world, including the following: Japan (KHK/MET), Europe (ECE R110), Europe (ISO 11439), United States (FMVSS304), Canada (CSA B51), and North America
